America.

Joe: that is that a real, I mean this is a real depiction based on what NASA picked up by your terra satellite, right? in real time.

That is correct.

Joe: over what amount of time does it take, though?

What we are seeing, these are data that we are — were taken between march and december of last year. We put them together to make a coherent story.

Joe: gotcha.

About Stock — degree by 5 degree resolution you can't see much — smallest features there what you see fires in west of a lot major sources you can see, that gets caught in tropical east

erlays carried across Atlantic to South America.

Joe: red spots we've got questions for you, in our live web chat underway on web right now,

I think the correction probably has to come from us. By that I mean the peoples of the world. I think we are going to have to negotiate with each other, to clean up each of us clean up the sources, because it's a global one world, and what's emitted in one comes to us, while it might go to europe.

Joe: relatively quickly that another question from our web chat john this is from john: how does industrial pollution come scar to natural pollution like forest fires good point do they move as quickly, are they as severe?

Industrial pollution, is about a about half of that, he total amount of compared to natural sources, industrial is half or more. From that. And by a industrial, I am including manmade sources such as the fires that are especially tropical, to clear forest for agriculture.

We've got another live chat question from the web.

I don't know the answer to that question. Joe: can you balance it, I mean proportion exactly.

We produce a considerable amount of pollution, I don't have those figures at my fingertips.

Joe: you would say we are at high end of it I mean are we — are we one of the world's great polluters, are we other nations.

Sherry I can't hear I can't hear.

Okay, unfortunately we appear to be having problems with our line to john piffer we appreciate him joining us with thought on that. And now let's take a look at the

SEE AN ANIMATION THAT SHOWS where the world's air pollution is moving at today's first hot site, provided by NASA. You can get to that site by going to our site, at enr.com/newsline. Then click on the hot sites button.

PRESIDENT BUSH CONTINUING his visit to California, defended his environmental record today. Using the ancient trees of Sequoia National Park as a backdrop, the President promised to protect what he called "these works of god" for the ages. He announced measures aimed at preserving all of America's National Parks. President Bush today we must seek best ways to achieve the common-goal leading to posterity a nation of fresh air, clean water and natural beauty. These policies arise from conviction a healthy environment is a national concern, and requires an active national government.

Joe: critics blasted Mr. Bush's national energy strategy in large part because of focus on developing new oil sources and more coal and nuclear power, as well.

OFFICIALS IN CALIFORNIA ARE hoping a new power-generating plant will help ease some of the power problems in the southern part of the state. The new plant is being pressed into service one year ahead of schedule. CNN national correspondent Frank Buckley joins us from Hemet in Riverside County, California, with more on the story. Frank, I wonder if you hear me sounds noisy at there.

It is very noisy. In fact, this is the sound of electricity being generated, at the water pumping station normally this is an area used for pumping water, today, four of the pumps have been converted into turbines to help generate electricity let me show you exactly how that is being done if you go outside we can show you Diamond Valley Lake that is a manmade lake, 800,000 square feet acre of water that is water, usually is pumped to that location, from the Colorado River aqueduct, that is how the water gets to this location, here. That water is usually pumped into the lake, and then that water is stored for future use. The process is being reversed today, the water coming back down from the reservoir, through these pumps which have been converted into turbines, and as that water passes through those turbines electricity is being generated let me step outside, here now and show you where that water ends up as it passes through and underneath where we were just standing it comes outside here, into this holding area this reservoir, and from here, the water goes into the San Diego canal and goes on to some of the customers in Southern California who use it. This is Phil Pace the chairman of the Metropolitan Water District Mr. Pace Tell us being generate here at this pumping station.

Our initial program right now, that returned — turned on four pumps converted generate 13 megawatts of power which is translates to enough power to accommodate 13,600 homes for one year. And that is what the initial program is

Fig. 7B

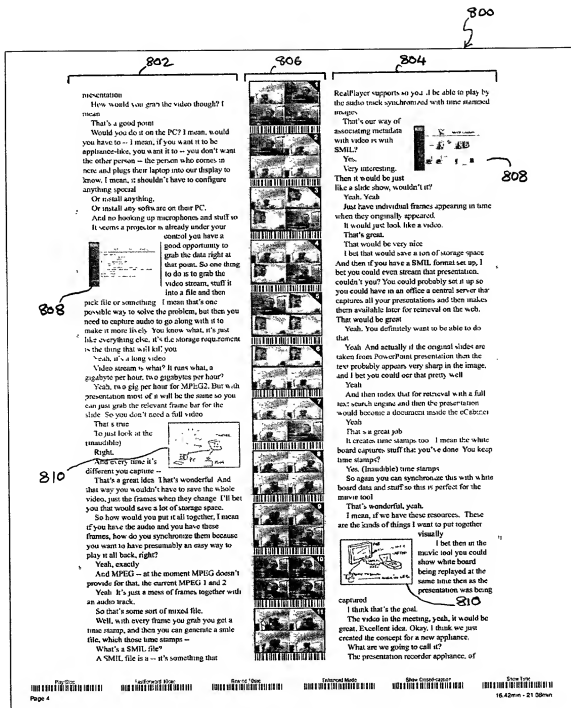

Fig. 8A

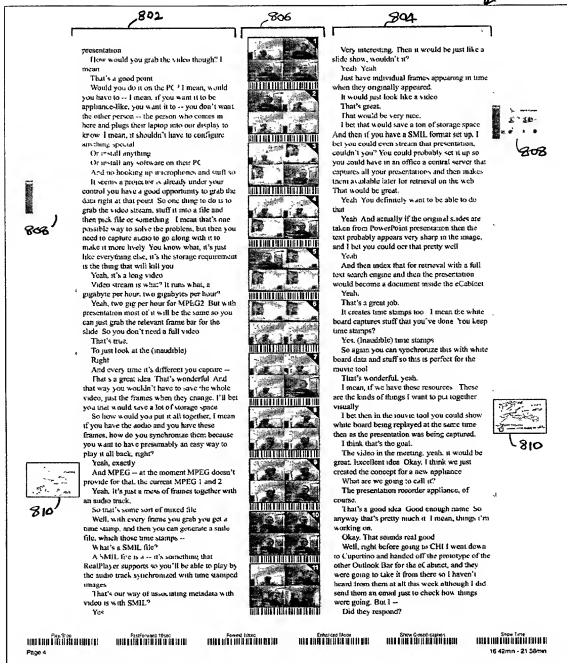

Fig. 8B

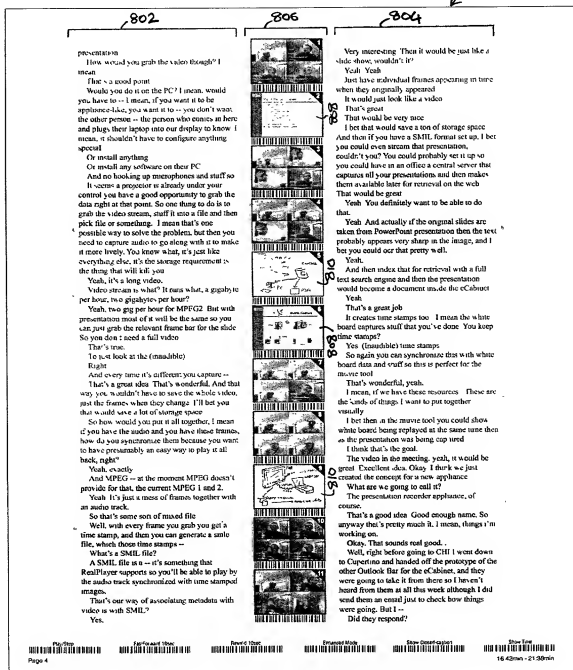

Fig. 8C

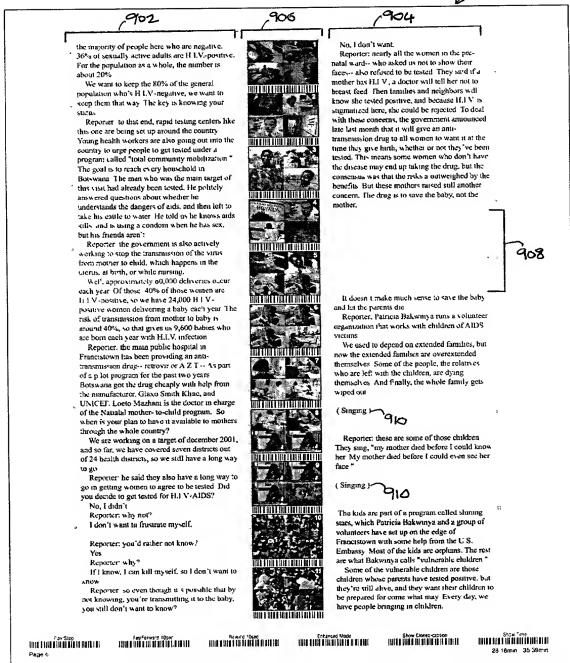

Fig. 9A

"the majority of people here who are negative. 50% of sexually active adults are HIV-positive, 1% of the population as a whole, the number is about 20%."

We want to keep the 80% of the general population who's HIV-negative, we want to keep them that way. The key is knowing your status."

Reporter: to that end, rapid testing centers like this one are being set up around the country. Young health workers are also going out into the country to urge people to get tested under a program called "Hond Community Mobilization." The goal is to reach every household in Bonaire. The man who was the main target of this visit had already been tested. He politely answered questions about whether he understood the dangers of aids, and then left to take his cattle to water. He told us he knows risks, and is using a condom when he has sex, but his friends aren't.

Reporter: the government is also actively working to stop the transmission of the virus from mother to child, which happens in the uterus, at birth, or while nursing.

Well, approximately 60,000 deliveries occur each year. Of those, 40% of those women are HIV-positive, so we have 24,000 HIV-positive women delivering a baby each year. The risk of transmission from mother to baby is about 40%, so that gives us 9,600 babies who are born each year with HIV infection.

Reporter: the main public hospital in Franciscown has been providing an anti-transmission drug - zidovudine or AZT. As part of a pilot program for the past two years Bonaire has got the drug cheaply with help from the manufacturer, Glaxo Smith Kline, and UNICEF. Leticia Mitham is the doctor in charge of the Nataloid mother-to-child program. So when is your plan to have it available to mothers through the whole country?

We are working on a target of december 2001, and so far, we have one end seven districts out of 24 health districts, so we still have a long way to go.

Reporter: he said they also have a long way to go in getting women to agree to be tested. Did you decide to get tested for HIV/AIDS?

No, I didn't.

Reporter: why not?

I don't want to frustrate myself.

Reporter: you'd rather not know?

Yes.

Reporter: why?

If I know, I can kill myself, so I don't want to know.

Reporter: so even though it's possible that by not knowing, you're transmitting it to the baby, you still don't want to know?

No, I don't want.

Reporter: nearly all the women in the prenatal ward - who asked us not to show their faces - also refused to be tested. They said if a mother has HIV, a doctor will tell her not to breast-feed. Then families and neighbors will know the tested positive, and because HIV is stigmatized here, she could be rejected. To deal with these concerns, the government announced last last month that it will give an anti-transmission drug to all women to want it at the time they give birth, whether or not they've been tested. This means some women who don't have the disease may end up taking the drug, but the consensus was that the risks was outweighed by the benefits. But these mothers are still another concern. The drug is to save the baby, not the mother.

Interviewing myself why the mother is not pregnant
She said one who is supposed to take some of that to be
What about if she dies?

It doesn't make much sense to save the baby and let the parents die.

Reporter: Patricia Bakwiyia runs a volunteer organization that works with children of AIDS victims.

We used to depend on extended families, but now the extended families are overwhelmed themselves. Some of the people, the relatives who are left with the children, are dying themselves. And finally, the whole family gets wiped out.

(Singing)

Reporter: these are some of those children. They sing, "my mother died before I could know her. My mother died before I could even see her face."

(Singing)

The kids are part of a program called "shining stars," which Patricia Bakwiyia and a group of volunteers have set up on the edge of Franciscown with some help from the U.S. Embassy. Most of the kids are orphans. The rest are what Bakwiyia calls "vulnerable children."

Some of the vulnerable children are those children whose parents have tested positive, but they're still alive, and they want their children to be prepared for come what may. Every day, we have people bringing in children.

Fig. 9B

Reporter: so even though it's possible that by not knowing, you're transmitting it to the baby, you still don't want to know?

The kids are part of a program called shining stars, which Patricia Bakwira and a group of volunteers have set up on the edge of Francistown with some help from the U.S. Embassy. Most of the kids are orphans. The rest are what Bakwira calls "vulnerable children."

Some of the vulnerable children are those children whose parents have tested positive, but they're still alive, and they want their children to be prepared for come what may. Every day, we have people bonding in children.

**Fig. 14**

1500

**Fig. 15**

And eventually you will have a more pump-powered oil turbine and 40,000 megawatts, correct?

That is a pump facility when we get on-line with all of them, we will be able to generate enough power for 43,000 homes. And that is able to be on-line later in the program, and at a point, that we entered into such State, if California to shut off our pumping plants along Colorado River or whatever when power is needed will generate about 150 megawatts of power from the state, that is quite a bit.

And you had an accelerate program or there is another program to convert pumps into turbo pumps, it supposed to take another year, wasn't it? Initially, we planned to come on-line with the initial facility, a year from this next summer, and, because of the power crisis, and all problems that we are having here in California, especially in southern California, we made a concerted effort to come on-line as quickly as possible and credit to our engineers to all our staff and our people, that we were able to accomplish this rather quickly.

All right Phil Pace chairman of board of the Metropolitan Water District Southern California thanks -- very much for joining us we appreciate it is that a just one small part of the energy puzzle in southern California, June, 40,000 megawatts not enough to power all of southern California, of course, 14 million residents live in southern California but during peak demand days, it could make a difference. Are?

Joe, I think we've got a quiet situation from you since you are now able to hear us and on outside of the plant inside or make quick questions, from our with that audience.

How much will it relieve the crisis you have to put it, one perspective, and, at the immediate moment, we are talking about 13,000 homes, that is not a lot. In terms of a few or big picture with 24 million residents but, at the peak demand continues, so is very hot day in Southern California as the very difficult, that is a constant electricity supplies California lacks sufficient capacity to meet, and, the point here, that is being made by the Metropolitan Water District is every single when most tourists as you get closer and closer to end of that reserve, and so 13 megawatts today, may not mean that much of a difference, eventually when they bring 40 m, that could make a very big difference.

Joe, Frank Buckley for us enjoying desert out there, Nevada county, California thanks very much next but size California energy, what options get more about that, with talk of this one. Main page of California Energy Commission. You can access that site by coming to our site at

san antonio news and checking on the hot sites feature

TOLCH WORDS TODAY FROM Attorney General Janet Ashcroft to California City bomber Timothy McVeigh. Ashcroft responded to McVeigh's attorneys' request more to file a motion asking to postpone the June 11th execution. In a statement, Ashcroft said: Ashcroft has already postponed the execution date once to give McVeigh's lawyers time to review a series of FBI documents that were never turned over during the bombing trial.

AN ALGERIAN MAN CONVICTED in the U.S. Pentagon sound highest state of alert -- Pentagon officials aware the higher alert status was not open to related to the embassy bombings trial in New York, yesterday of course four men were convicted in 1996 bombings two of U.S. Embassies in East Africa defense attorneys began arguments today against imposing the death penalty in the case, two of these convicted, could be sentenced to death.

SPECIFICALLY FOUR MEN WERE convicted over springing with Osama Bin Laden to kill Americans, it is believed that Bin Laden is an Al-Qaeda U.S. Government offered a five million dollar reward for information in a lead to his arrest, today, a spokeswoman for the Taliban the militant that controls most country, said Washington has produced no evidence, linking Bin Laden to embassy bombings -- bombings that national spoke via videophone to group of international jurists via at CNN's world report conference held here in Atlanta.

Osama Bin Laden is -- was creation of United States, itself, people were obligated to come to Afghanistan and fight wars. In '70's, 80's, and those people were called heroes. By your president like Mr. Ronald Reagan and Dick Cheney, they were called heroes up -- of independence because fighting their cause all of a sudden they turned into terrorists, we don't know as to what is definition of terrorism in the United States. Because how can the people, trying to kill man or attempt on giving him a fair trial? How can you justify that the United States tried to kill Bin Laden is about to tell us that he is a terrorist or he is a suspect of terrorism?

Joe, Osama Bin Laden is one of 13 men still wanted in the embassy bombing case. And Algerian man convicted in United States as of plotting terrorism reportedly told said the Los Angeles International Airport was to have been a target. "The Los Angeles Times" says al-Qaeda Bin Laden had planned to place a large bomb at the airport.

Fig. 16A

Fig. 16B

The Newshour, (PBS, Channel 233)

Start Time: 6:01pm - Record Time: 00:54:49min

June 5, 2001

the comeback of Silvio Berlusconi in Italy. It all follows our summary of the news that Tuesday. Major funding for the Newshour with Jim Lehrer has been provided by: imagine a world where we're not diminishing resources, we're growing them. I should, a clearer hearing had made from com. A/D M., the nature of what's to come. And by the Corporation for Public Broadcasting. This program was also made possible by contributions to your job station from viewers like you. Thank you.

Lehner: The Federal Reserve cut a key interest rate again today. Its open market committee lowered the federal funds rate half a point to 4%—the lowest in seven years. Banks charge that rate on overnight loans to each other. It was the fifth reduction this year. In a statement, the fed said it still saw weaknesses in the economy, leaving open the possibility it might cut rates again. House Democrats today announced their alternative to President Bush's energy plan. They gathered at a gas station near the Capitol, and said they'd increase production and reduce demand. They called for federal caps on electricity prices, restrictions on drilling in federal lands, and tax incentives for energy-efficient cars and homes. House minority leader Gephardt said it was a balanced approach.

We believe we can have more than adequate supplies of energy and save our environment at the same time if we do the right things in research on renewables, an conservation, and on new sources of energy in high technology. We do not accept the belief that this administration apparently has that we have to drill our way out of this problem.

Lehner: President Bush is to announce his plan on Thursday. It's expected to put greater emphasis on finding more energy and building more production capacity, plus taking a new look at nuclear power. He has opposed price controls.

A runaway freight train rolled across northwest Ohio for nearly an hour today. It was unattended as it crowded in from two counties and down toward Bowling Green at speeds of up to 45 miles per hour. Police said the southbound C & N train got away while the engineer was operating a switch at a stop near Toledo. It finally derailed, and a company official managed to climb on and stop it, about 55 miles from Columbus. C & N said the cargo aboard the 47 car train included a non-explosive industrial acid. No one was injured.

In the middle east today, thousands of

Palestinians protested the anniversary of Israel's founding in 1948, and fierce fighting erupted across the West Bank and Gaza. We have a report from Louisa Bates of Associated Press television news.

Reporter: more than 10,000 Palestinians marched on the main square of the west bank town of Nablus in the largest demonstration against Israel seen for several years. The event was organized to mark "Al Nakba," meaning "The Great Catastrophe." That's the name Palestinians give the anniversary of the creation of the state of Israel in 1948. (Gunfire) many of the demonstrators headed to Israeli check points after the rally. When an Israeli soldier removed a Palestinian flag, he was jeered by the angry crowd. As a traffic circle near Ramallah, a regular flashpoint during the intifada, clashes with Israeli soldiers turned violent. Across the west bank and Gaza, four Palestinians were killed and more than a hundred were injured. (Gunfire)

Lehner: since that report was filed, Palestinian doctors put the number of wounded at more than 200, and the Israeli military said an Israeli woman was killed in the west bank after a nightfall. In Jerusalem today, a Palestinian bus driver was convicted of murdering eight Israelis last February. He drove his bus into a crowd near Tel Aviv. It was the single deadliest incident since the current violence began last September. Back in this country today, more aggressive treatment of high cholesterol was proposed today by a federal medical panel. It had been conceived by the National Institutes of Health. The group of experts said the change could triple the number of people who take cholesterol-lowering drugs and dramatically reduce deaths from heart disease. But they said doctors need to make it a higher priority.

There is a clear undertone of people who need cholesterol lowering. That is a chronic problem. We have put out guidelines and information and said that this deserves aggressive attention, and we have to do more to make it easy to implement all of those guidelines, and make it possible to apply them in actual practice.

Lehner: it's estimated more than 50 million Americans have high cholesterol. The new guidelines recommend different tests to screen for the problem. They also re-examine the recommended levels for good and bad cholesterol. We'll have more on this story later in the program tonight. Married couples with

1608
2

Hardball (CNBC, Channel 356)

Recording Time: 5:00pm - Total Time: 00:59:59 min
September 14, 2001

One week has passed since terrorist attacks destroyed the World Trade Center and damaged the Pentagon and hope for finding survivors in the rubble is fading fast. Tonight, the latest on the investigation and plans for a possible retaliation. I'm Chris Matthews. Welcome to a special edition of "Hardball" - CapSizing by the national reporting institute - www.nicup.org. 5,422 people are still missing in the rubble of the World Trade Center and New York Mayor Rudy Giuliani doesn't expect anymore survivors.

The chances of recovering any live human beings are very, very small now. Given the amount of time and the condition of the site. These chances are not totally, however, ended for ever so, we will - we will still conduct ourselves as a rescue effort as well as a recovery effort.

Today, the nation stopped at 8:45 this morning, the time the first plane hit to mark the tragic events of one week ago. [interruption]

At the White House, President Bush proved forward, vowing to extinguish terrorism and healing the American people.

Today, I herald the soul and spirit of America with live examples of people who've made a huge difference and those who suffer and those who hurt. This is a great land. It's a great land because our people are so decent and strong and compassionate.

Meanwhile, Attorney General John Ashcroft says other suspects could still be at large. So far, at least. "No people have been denied and questioned about the attacks and four arrested on material evidence. Among those detained, considerable doubt over men who were carrying box cutters and large amounts of cash who were pulled off a train in Texas. And a man detained in Minnesota prior to the attack who aroused suspicion for trying to buy time on a jet simulator, despite a lack of flight experience. In Afghanistan, refugees continue to pour out of the country, expecting a U.S. attack. Afghanistan's ruling Taliban says it hasn't ruled out the possibility that Osama bin Laden was behind last week's attacks. But it wants proof before it hands over bin Laden. Even so, Defense Secretary Donald Rumsfeld says the surrender may not matter much.

Our adversaries are not one or two terrorist leaders, even a single terrorist organization or network. It's a broad network of individuals and organizations that are determined to terrorize and, in so doing, to deny us the very essence of

what we are -- free people.

This hour, we're going to get reaction from former Senator Warren Rudman, plus we'll go over the military game plan with Harry McPherson and Alexander Haig. And talk to Donald Marry run on how President Bush is handling this crisis and we begin this hour at ground zero with NBC's Chip Reid. Horrible news today, right?

Well, absolutely, Chris. This is the sixth day in a row that they have not pulled single live person out of that rubble. You can see over my shoulder it is still burning actively. The smoke is pouring out of there. The conditions for the rescue workers are still horrendous and they are now going through an ongoing process, officials are, as trying to decide it what point do you just decide this is no longer a rescue effort where you're looking for people alive and it becomes a recovery effort where you're simply looking for bodies? Some officials think it's better to declare, at some point, it's over. So think it's better to just let the families come to that conclusion on their own. Rudy Giuliani today said that there is a very, very small chance of finding people alive in there. At the same time, he said there is still a rescue effort. He does not want to squish hope completely, but on the other hand, he wants it as families to come to the conclusion that the chances of finding their loved ones in there alive are very, very slim indeed. One other point they made today, Rudy Giuliani and other officials said, they're pleading with the public not to come down here because they have been coming down to devices to take pictures, see the site. Maybe it is part of the mourning or grieving process for people generally, but it is interfering with the part of the rescue workers in there. They want this site to be kept open so that the vehicles carrying bodies and equipment in and out will not be impeded by people down here taking pictures. Chris?

Thank you very much. NBC's Chip Reid at ground zero. For the latest on the plans of a possible military strike, we get this report from NBC's Jim Mikolajewski at the Pentagon.

U.S. Marines dressed for combat leave their base in Okinawa today. The Army's 82nd Airborne at Fort Bragg, North Carolina. They play a major role in any U.S. invasion of Afghanistan.

They're waiting for a call to arms. And they're ready to go and answer it.

Donald Rumsfeld says when it comes to America's self-defense, all options are on the
